Acetylcholine
  apolipoprotein E and ChAT deficits in neurones containing 225–226
  neurotransmission by, hippocampal, exploratory behaviour and 187
  receptors, nicotinic, slow desensitization and fast recovery 97
  vesicular transporter, gene expression 193
Action potentials, patch-clamp recording 530–534
  errors introduced by amplifiers 532–534
  limitations of amplifiers 532
  see also Impulse
Activity-dependent plasticity in development, NCAMs and 473–480
ADAM family 529
Adeno-associated virus as vectors in gene therapy 50, 51
Adenosine
  and adenosine analogues, neuronal cells and effects of 16
  receptors, glutamate neurotransmission and 237–238
Adenovirus
  E1B19K protein 559
  as gene vectors 50, 51, 52
  Parkinson's disease 195
Adhesion molecules, cell (CAMs) 68–72, 409, 473–480
  activity-dependent plasticity in development and 473–480
  form and function 473–474
  leukocyte entry into CNS and 331–332, 409
  synaptic plasticity and 477–479
  see also specific types
Adrenal gland
  hormone secretion in, regulation 383–384 (L)
  medulla implants in Parkinson's disease 106
  see also Hypothalamo–pituitary–adrenal axis
Adrenal steroids and mast cell degranulation 28–29
β-Adrenoceptors and antidepressants 382
Affective disorders, bipolar (manic–depressive illness), genetics 194
Afterhyperpolarization, Ca^{2+}-activated K^+ currents underlying 150–154
ω-Agatoxin and Ca^{2+} channel subtypes in magnocellular neurosecretory cells 440–442
Aggression
  NGF and 517
  NO and NO synthase and 84, 277–278 (L)
Aging brain, integrins and 71
Agnosia
  apperceptive visual 403
  face 403
AIDS, neuronal death 112–113
Airway neuroepithelial chemoreceptors for oxygen 437
ALIAmides on mast cells and CNS neurones 518, 519
Allergic autoimmune encephalomyelitis, cytokines and 332, 333, 336, 337
α subunit of Ca^{2+} channels
  α_1 35, 36
  α_2 35
Alzheimer's disease 371–372, 450
  apolipoprotein E and memory in 224–228
  cytokines and 409–410
  familial 371–372
  mast cells and 518
  metabotropic glutamate receptors and 270
  neurobiology 157–158 (BR)
  signal transduction 371–372
  therapy
    drug 270
    gene, in experimental model 53
Amiloride-sensitive Na^+ channels, rat epithelial, in touch sensitivity studies 259
Amino acids, excitatory, see Excitatory amino acids; Excitoxicity
γ-Aminobenzoic acid, see GABA
cis-4-Aminocrotonic acid 190 (L)
1-Aminocyclopentane-1R,3R-dicarboxylic acid (APCD) 219, 220, 237
4-Aminopyridine and glutamate exocytosis 236
Ammonium ions in bee retina 361–362
Amnesia and metabotropic glutamate receptors 220
cAMP, neuronal cells and effects of 16
AMPA receptors 339
  fast desensitization and slow recovery 97–98
  gamma rhythms and 468–469 (L)
  glial 340, 341
  timecourse of transmitter clearance and 166–167
Amphibian opioid peptides, dual-acting 31–35
β-Amyloid (Aβ)
  formation 450
  therapy of Alzheimer's disease and 270
β-Amyloid precursor protein 450
  cytokines and 409–410
  mutation in familial Alzheimer's disease 371–372
Amyotrophic lateral sclerosis, ciliary neurotrophic factor treatment 452
Amyotrophic lateral sclerosis–parkinsonism–dementia of Guam 270
anachronism, gene 64
Anatomy, see Atlases; Neuroanatomy
Antennae lobes and locust olfaction 490, 491, 492
Antidepressants in major depression, 5-HT_{1A} antagonists accelerating effects of selected 378–383
Antigen-presenting cells in brain 409
Antipsychotic drugs, PET studies of drug binding 212, 213
Antipyrexia 254 (BR)
Apamin
  afterhyperpolarization and Ca^{2+}-activated K^+ channels insensitive to 151
  afterhyperpolarization and Ca^{2+}-activated K^+ channels sensitive to 150, 152
Apis mellifera retina, signalling of metabolic requirements 360–362
Aplysia californica
  intrinsic and extrinsic neuromodulation 58
  neuromuscular circuits 56, 57
  long-term sensitization of gill-withdrawal reflex, CAMs and 478
Apolipoprotein E and memory disorders in Alzheimer's disease and non-demented elderly 224–228
Apoptosis (primarily neuronal) 109–114, 555–562
  cell cycling and 65–67
  definition 109, 556
  in development 17–18, 111, 450–455, 560
  familial Alzheimer's disease and 372
  interleukin-converting enzyme (ICE) proteases and 555–562
  in ischaemia/epilepsy/gp120 toxicity 109–114
  necrosis and, relationship between 112
Apperceptive visual agnosia 403
Appetite, see Eating
Arachidonic acid and glutamate exocytosis 236, 237, 239
Area 17, see V1
Area brightness, see Brightness
Area contrast 429, 433
Area MT, see V5
Areas V1–V5, see V1; V2; V3; V4; V5
Arteries
  myocytes, hypoxia and 438
  oxygen in, chemoreception in carotid body 435–436
Astrocytes
  Ca^{2+} signalling 349
  cytokine effects 335
  development 368 (BR)
  gap junctions 305–306, 319–325
  glutamate receptors 349
  microglia and, crosstalk 316–318
  Na^+ channels
    density 329
    voltage-gated 326–327
  neurones and, crosstalk (interactions) 316–318, 324, 327–328, 329
  nucleoside and nucleotide effects on 13–15
  optic nerve, morphology 353
  receptors, regulation of extent of astrocytic network by 320–322
Ataxia, spinocerebellar, see Friedreich's ataxia; Spinocerebellar ataxia

Atlases/maps/topography (of brain/nervous system)
Drosophila 138 (L), 542–546
rat, prenatal development 116–117 (BR)
retinotectal 527, 542–546
visual cortex 481–489
display after unfolding or flattening 483
zebrafish 525
see also Neuroanatomy
ATP, astrocytes and trophic effects of 14, 15, 16
ATPase, Na^+,K^+, in astrocytes 329–330
Audiogenic stimulation of genetic form of reflex epilepsy in birds 247–249, 250
Audition, bats 564–565 (BR), 567 (BR)
Autism and theory of mind 299–300 (BR)
Autoimmune encephalomyelitis, allergic, cytokines and 332, 333, 336, 337
Autoimmune neurological disease (in general) 301–302 (BR)
cancer and 551
demyelinating disease 29, 301 (BR)
see also specific diseases
Autophagy in neuronal apoptosis in development 111
Axon/neurite
fasciculations, see Defasciculations; Fasciculations
giant, squid, see Squid giant axon
growth and regeneration, see Growth; Regeneration
optic nerve, in studies of neuronal–glial cell interactions 352–358
polysialic acid of NCAM and its effects on 422–423, 424
structure/function/pathophysiology 564–565 (BR)
terminals, of magnocellular neurosecretory cells, Ca^{2+} channel subtypes 440–443
trans-Azetidine-2,4-dicarboxylic acid (tADA) 220, 222

B

Bacteria, frataxin homologues in 465–466
Baculovirus ICE inhibitor (p35) 558, 559
Barrel cortex, rat, postnatal neuronal growth 462, 463
Basal ganglia dysfunction, diseases caused by 23–24
Bats
audition 564–565 (BR), 567 (BR)
comparative neurobiology 567–568 (BR)
Bcl-2 as protagonist of apoptosis 113
BDNF, see Brain-derived neurotrophic factor
Becker's myotonia and defective Cl^- channels 4
Bee retina, signalling of metabolic requirements 360–362
Behaviour
gene targeting studies, see Gene targeting
mast cell numbers in brain affected by 27–28, 29
network contributions to 535–537
NO and 83–84, 277–278 (L)
in Parkinson's disease model after foetal nigral graft 106
see also specific types of behaviour
Benzodiazepines, $GABA_A$ receptor sites 140, 141, 142
Bergmann glial cells, neurotransmitter receptor expression and Ca^{2+} signals 349, 350
β amyloid, see Amyloid
β subunit of Ca^{2+} channels, role in facilitation of Ca^{2+} currents 39
Binocular vision 114–115 (BR) 407–408 (BR)
Biological clocks 254–255 (BR)
Biophysics, cellular 525–526 (BR)
Birds, brain chimera studies of genetic form of reflex epilepsy 246–252
BK_{Ca} channels 151
BL/6 mouse, gene targeting (null mutants) 177–180, 181–182, 183, 184, 187 277–278 (L)
Blindness 401–402
kinds 402
levels of blind vision 402
Blood–brain barrier
gene therapy and 50
integrins and 69–70
Bouton synapses 294
Bovine spongiform encephalopathy 257, 520–521 (BR)
Brain
chimeras, genetic form of reflex epilepsy in birds studied via 246–252
component-placement optimization 413–415 (L)
cytokines and, see Cytokines
development, see Development
evolution, see Evolution
quantum dynamics, and consciousness 445–446 (BR)
wiring 413–415 (L)
see also Blood–brain barrier; Central nervous system
Brain-derived neurotrophic factor (BDNF) 389
motorneurone survival and 452, 453
Brainstem, genetic form of reflex epilepsy in birds having origin in 246–252
Brightness
enhancement 428–429
filling-in of 429–430, 432
Brn3 proteins 240

C

C57BL/6 mouse, gene targeting/null mutants 177–180, 181–182, 183 184, 187, 277–278 (L)
CA1 region (hippocampus)
gamma rhythms and recurrent inhibition in 468–469
integrins 70
long-term depression and potentiation in 127, 129
Cadherin 474
Caenorhabditis elegans
apoptosis 66, 557
neuronal guidance 509, 510, 527–528
touch sensitivity studies 258–261
Calcium ion(s)
glutamate receptors and neurotransmission and 238, 342
in hypothalamus 363–365
K^+ channels and, see Potassium ion channels and currents
neurotransmission and 119, 120–125
calcium-independent transmission 120–125
in optic nerve, axonal activity affecting 355
in retina 73–81, 547–554
bleaching activity and photolysis and 505, 548–551
cGMP phosphodiesterase activity modulated by 75–76, 79, 504, 549
Müller cell 308
pathology (of Ca^{2+}-binding proteins) 551–552
rod photoreceptor sensitivity in vertebrates regulated by 73–81
secretory granule release of 411–413
synaptic metaplasticity and 127–128
synaptic vesicle release of 411–413
Calcium ion channels
defective, hypokalaemic periodic paralysis and 4, 9
in excitable cells, facilitation of currents through 35–43, 383–384 (L)
in glial cells 347
of graded-potential neurones 294–295
in magnocellular neurosecretory cell somata and axon terminals, subtypes 440–443
voltage-dependent, see Voltage-gated/dependent channels
Calcium ion-dependent cell adhesion molecules 474–475
Calcium ion signalling in glial cells 342, 346–351
astrocytes 346, 349
astrocyte–astrocyte 324
astrocyte–neurone 324
heterogeneity 346–348
CAMs, see Adhesion molecules
Cancer
gynaecological, cerebellar ataxia associated with 302
retinopathy in 551
Cannabinoid receptors, mast cell 519
Cap1 551–552
CAPIT (Core Assessment Protocol for Intracerebral Transplantation) 106
Carbon dioxide and Müller cells 308, 310
Carotid body chemoreceptors for arterial oxygen 435–436
Cat
network contribution to behaviour 536–538
strabismic, neuronal synchronization experiments 134–135
Catecholamines 191–196
neuropsychiatric disorders and 194–195
Cations, divalent, synaptic transmission and 123
Caudate, foetal nigral tissue grafted into 105
$CD4^+$ T cells, adenoviral vectors and 499–500
ced genes 66, 556, 557, 558

striate, see V1
visual, see Visual cortex
Corticospinal tract, regeneration 512
Corticosteroids and mast-cell degranulation 28–29
Corticostriatal projection 19–24
CPP32 557
Cre recombinase in transgenic analysis of nociceptor function 244
Creutzfeldt–Jakob disease 257, 520–521 (BR)
Culture, evolution 298 (BR)
Current-clamp mode with patch-clamp amplifiers in recording of action potentials 531, 532–534
Current-to-voltage converter unit 531
CyaY protein, similarity to frataxin 465–467
Cycad toxicity 270
Cyclic nucleotides, see AMP; GMP
Cyclin(s) 62–63, 65, 66
Cyclin-dependent kinase (CDK) 62, 63, 64, 67
Cytokines 316–318, 331–339, 409–410
in CNS and brain pathology 409–410
in inflammatory lesions 331–339, 409–410
in defence strategies in nervous system 516
glial effects 316–318, 335, 409
neuroimmune interactions and 46–47, 409, 515, 516
receptors 334
Cytoskeletal proteins and binding proteins, *mec* genes encoding 259–260
Cytotoxic role of microglia 315–316

D

Dark adaptation in vertebrate photoreceptors 502–507
Darwinian nature of neural development 460–464
Database, *Drosophila* nervous system 138 (L)
db/*db* mouse 159–160
DCC gene 527–528
Death, cell, see Apoptosis; Cell; Necrosis; Neurones
Defasciculations, axon, CAMs and 475–476, 476–477
Defence strategies of nervous system
cytokines and 516
mast cells and 518–519
NGF and 514–515, 516
Degranulation, mast cell 28–29
δ-opioid receptors, opioid peptide with equal affinity for μ- and 31–35
δ subunit of Ca^{2+} channels 140
Deltorphins 31–35
Demyelination 1–2
adenoviral vector-related 500–501
autoimmune 29, 301 (BR)
inflammation in brain and 1–2, 336, 500
mast cells and 518
NO and 336, 410
restoration after, see Remyelination
Denervation, muscle, terminal Schwann cells responding to 281, 283, 284
Depolarization, facilitation of Ca^{2+} currents in excitable cells by 36–37, 41–42
Depression (at synapses), long-term (LTD)
associative 127, 566–567 (BR)
cerebellar 11–12 (L)
corticostriatal fibres inducing 21–23
in gene-targeted mice 189
metaplasticity 126
striatal 279–280 (L)
Depressive disorders
bipolar (manic–depressive illness), genetics 194
major, 5-HT_{1A} antagonists accelerating effects of selected antidepressants in 378–383
Depth perception (stereopsis) 407–408 (BR), 430–431
in processing of optic flow 196–202
Dermorphin 32, 33
Desensitization (of receptors)
of facilitatory metabotropic glutamate receptor pathway 238

fast synaptic transmission and impact of 96–101
Development (nervous system – predominantly CNS)
apoptosis in 17–18, 111, 450–455, 560
cell cycle during 63–65
cognitive 406 (BR)
cortical 413–415 (L)
genes and 175
darwinian nature 460–464
dietary lipid and lipid metabolism and 253–254 (BR)
Drosophila 528–530
gene transfer and stage of 50

in recoverin, immunopathology 551
EGF, see Epidermal growth factor
Elderly, apolipoprotein E and memory impairment in 224–228
Electrical properties of cells 525–526 (BR)
Electroencephalographic studies of genetic form of reflex epilepsy in birds 247, 249, 250, 251
Electrophysiological studies
cortical neurones 302 (BR)
ion channels 407 (BR)
Electrophysiology
of mind 252–253 (BR)
of neurones 155 (SR)
Embryology, see Development; Foetus and embryo
Embryonic stem cell (of 129-type mice), gene targeting studies 178–180, 182 183–185, 277 (L), 278 (L)
En (*Engrailed*) genes 527, 542–546
Encephalomyelitis, allergic autoimmune (EAE), cytokines and 332, 333, 336, 337
Encephalopathies, transmissible spongiform 257–258, 520–521 (BR)
Endocrine system, interactions with nervous system 25–31, 515–516
NGF and 515–516, 519
Endosialidase (endo N) 422, 423
Endothelin and astrocytes 321, 324
Engrailed (*En*) genes 527, 542–546
Eph receptor tyrosine kinase 511, 527, 545
Epidermal growth factor (EGF), neural stem cells and 388–393
Epilepsy
apoptosis with damage due to 110–112
electrophysiological features 302 (BR)
reflex, brain chimeras in birds in studies of genetic form of 246–252
Epithelium
airway, chemoreceptors for oxygen 437
amiloride-sensitive Na^+ channels in touch sensitivity studies 259
Error processing, cortical neurone operation and 132–133
Erythropoietin-producing hepatocellular receptor tyrosine kinase 511, 527, 545
Escape swim central pattern generator of *Tritonia diomedea* 58–59
Ethical issues
gene therapy 53
research issues 523–524 (BR)
Event-related potentials 252–253 (BR)
Evolution (of brain) 298–299 (BR), 414 (L)
isocortex 89–92 (L)
receptors and channels 445 (BR)
ex (*expanded*) gene 376
Excitability, sarcolemmal, myotonia and periodic paralysis and aberrant 3–10
Excitable cells, facilitation of Ca^{2+} currents in 35–43, 383–384 (L)
Excitatory amino acids, corticostriatal projection and 19–24
Excitatory neurones, gamma rhythms generated by 204–205
Excitatory post-synaptic currents/potentials
erroneous 133
miniature
AMPA receptor-mediated 97, 98
amplitude distribution and variation 170
in striatal neurones, cortical activation inducing 19, 20
timecourse 166
in visual cortex, orientation selectivity 273, 274, 275, 276
Excitoxicity and metabotropic glutamate receptors 267–271
Exocytosis from synaptic vesicles, see Synaptic vesicles
expanded (*ex*) gene 376
Exploratory behaviour in mice, hippocampal ACh neurotransmission and 187
Extracellular matrix/space
glial–neuronal interactions occurring via 353
integrins and 70–71
Eye movement
direction detector, autism and 299–300 (BR)
in studies of optic flow and motor responses 197
Ezrin 375

F

Face agnosia 403
Facilitation
of Ca^{2+} currents in excitable cells 35–43, 383–384 (L)
presynaptic, by metabotropic glutamate receptor 236
Familial Alzheimer's disease 371–372

Fasciculations, axon, CAMs and 474–476
see also Defasciculations
Fat, see Lipid
Fatty acids and brain development 253–254 (BR)
Fayoumi epileptic chicken, brain chimera studies 246–252
Feltz, Paul 161–162 (O)
Fever (pyrexia) 254 (BR)
cytokines and 46
FGF, see Fibroblast growth factor
Fibroblast growth factor (FGF)
basic
neural stem cells and 388, 389
nucleosides and nucleotides interactions with 14, 16
receptor, CAMs and 479
Fibronectin 70, 71
repeats, in CAMs 474, 475

Fish, neuroanatomy 525 (BR)
Fixed-charge theory and synaptic transmission 121–124, 125
Fluorodopa uptake (in Parkinson's disease and its models) 213
after foetal nigral grafts 106
Fly
optic lobe, circadian rhythms 285–291
photoreceptors and graded-potential transmission 292, 293, 296
Flybrain Project 138 (L)
FM-modulated echolocation in bat 565 (BR), 566 (BR)
Foetus and embryo
grafts of CNS tissue from
in Parkinson's disease 102–109
spinal cord repair using 229
rat brain development, atlas 116–117 (BR)
Forebrain, mammalian, neural stem cell in 387–393
'40Hz' rhythms, see Gamma oscillations
Frataxin 465–468
Free-oxygen radicals and neural injury 568
Frequency-modulated echolocation in bat 565 (BR), 566 (BR)
Frequenin 551
Friedreich's ataxia 465–468
Frontal cortex and neural correlates of consciousness 456–459
Functional imaging 252 (BR)
schizophrenia 173, 174
visual cortex 482–483, 483–485, 486–487

G

G protein(s)
Alzheimer's disease (familial) and 371–372
dark adaptation and 504–505
inhibition of Ca^{2+} currents by 38–39, 40, 383–384 (L)
reversal 41–42
G protein-coupled receptors, photoreceptors 506
GABA
glial cells and 348, 363
retinal (Müller cells) 310, 311
prion protein and 257–258
V2 and effects of applying 539
GABA receptor(s) (in general)
glial 348
inhibitory post-synaptic potentials mediated by 98–99, 100, 206, 207
Paul Feltz's studies 162 (O)
timecourse of transmitter clearance and 166–167
$GABA_A$ receptors 139–143, 386 (L)
fast desensitization and fast recovery 98–99, 100
non-CNS 142
subtypes 139–143, 386 (L)
physiological role 143
$GABA_C$ receptors, selective agonists 190 (L)
Gabor function 385 (L), 386 (L)
Gamma oscillations/rhythms (40Hz rhythms) 202–207, 468–470 (L)
inhibition
functional consequences of 207
recurrent 468–470 (L)
neuronal networks for 202–207, 469–470 (L)
Ganglion/ganglia
basal, diseases caused by dysfunction of 23–24
stomatogastric, of decapod crustaceans, neuromodulation in 60
Gangliosides and Guillain–Barré syndrome 302
Gap junctions, glial 305–306, 319–325
in optic nerve, axonal activity increasing 355–356
Gaze-following abilities and autism 299–300 (BR)
Gene(s) (in nervous system)
expression
apoptosis-associated changes in 555–556
identifying changes 84–88
'helper', taking over function of targeted gene 188
in peripheral neurogenesis (including nociceptors) 240–246
see also specific genes
Gene targeting in mouse
behaviour studies 83–84, 177–189, 470–472 (L)
problems and confounding factors 179–180, 184–185, 186–187
knock-in mutant 182
knock-out mutant, see Knock-out (null) mutant mice
NO synthase studies 83–84, 277–278 (L)
nociceptor function studies 244
Gene therapy 49–54
gene transfer in 49–54
approaches to 49–50
target cell and tissue characteristics 50
vectors 50–52, 195, 497–501
Parkinson's disease 53, 194–195
potential applications 49
safety and ethical issues 53
GENESIS software program 190 (L), 279 (L)

Alzheimer's disease (familial) 371–372
schizophrenia 171–176, 194
see also specific genetic disorders
Geniculate body
lateral nucleus of
cooling deactivation experiments 538, 540
orientation selectivity of visual cortical neurones and 272–277
medial, bat audition and 566
medial nucleus of, cooling deactivation experiments 540, 541
Genome, human, evolution 298 (BR)
Giant axon of squid, see Squid giant axon
Gill-withdrawal reflex in *Aplysia*, CAMs and long-term sensitization of 478
Glial cells 305–369
Ca^{2+} signalling, see Calcium ion
cytokine effects 316–318, 335, 409
cytotoxicity 568 (BR)
development, see Development
excitability and inexcitability 328–329
genes introduced into 49–50
glutamate receptors 339–345, 348, 357, 359, 363–364
inotropic 340–341, 342
metabotropic 341
Na^+ channels, see Sodium ion channels
neuronal interactions with, see Neurone
physiological actions of receptor activation 363–365
signalling 205–269
transplantation 369 (BR)
trophic actions of nucleotides and nucleosides on 13–18
tumours 369
see also specific types
Glial growth factor (GGF) 284
Globus pallidus and movement disorders 417–422
Glomus cells and arterial oxygen chemoreception 435–436
Glucocorticoids and mast cell degranulation 28–29
Glutamate
AMPA receptors and 97–98
exocytosis, control 235–239
Müller cell uptake 309–310, 311
Glutamate receptors 219–224, 267–271, 339–345 416–417 (L)
gamma rhythms and 468 (L)
glial cell, see Glial cell
metabotropic, see Metabotropic glutamate receptors
molecular biology and functional properties 339–340
schizophrenia and 416–417 (L)
Glycosylation, NCAM 476
GM_1 gangliosides and Guillain–Barré syndrome 302
cGMP and phototransduction 73, 75–77, 80, 504, 548
Gonadal steroids and mast cell degranulation 28
Gonadotrophin-releasing hormone and mast cell degranulation 28
gp120-induced neuronal death 112–113
gp130 and leptin receptor, structural relationship 160
Graduate training in neuroscience 47–48
Grafts, see Transplants
Granulocyte–macrophage-CSF, microglial responses 314–315
Growth/outgrowth/sprouting/arborizations (of neurone/neurite/axon) 144–149, 280–285, 474–476, 527–528
CAMs involved in 474–476
development and its regressive effects on 462
economics 144–149
inhibitory/repulsive cues 229–230, 507–513, 527–528, 544
polysialic acid (of NCAM) effects on 422–423
target cells in, see Targeting

terminal Schwann cells inducing/guiding 280–285
visual system 527, 542–546
see also Regeneration
Growth cones 507–513
membrane insertion and 144–146, 149
neurotransmitter release on contact of target cell by 454
repulsive or inhibitory cues 229–230, 507–513, 527–528, 544
retinal axons 544–545
Growth factors
developing brain and 387–393
mast cells and 29
nucleoside and nucleotide interactions with 14, 16
steroid interactions with 365
GTP, neuronal cells and effects of 17
GTPases, small, and their regulators 208 (BR)
Guanosine analogues, neuronal cells and effects of 17
Guanylate cyclase (GC), retinal 75–76, 79, 547–549, 550
Guanylate cyclase-activating proteins (GCAPs) 547–553
Guillain–Barré syndrome 302
Gynaecological malignancy, cerebellar ataxia associated with 302
Gyrus, superior temporal, schizophrenia and 173–174

H

Haloperidol, movement disorders with 420–421
Healing of CNS wound, extracellular matrix molecules in 71
Hearing in bats 564–565 (BR), 567 (BR)
Hebenula, mast cells in 27–29
Helix pomatia neuronal signalling to glial cells 359–360
Hepatocellular receptor tyrosine kinase, erythropoietin-producing 511, 527, 545
Herpes virus as vectors in gene therapy 50, 51
immune responses 499
Heteromodal association neocortex and schizophrenia 171–176
β-Hexosaminidase A (and its gene) and Tay–Sachs disease 181
Hippocampus
gamma rhythms and recurrent inhibition in 468–469
glial cells
astrocytic gap-junctional communication studies 322, 323
glutamate receptors 341
5-HT receptors, pindolol effects 381, 382
integrins 70
learning tasks and effects of APCD injected into 220, 221
long-term depression and potentiation in 127, 129
volume, apolipoprotein E and 225–226
Hirudo medicinalis glial cells, ion changes in response to neurotransmitters 360
Histocompatibility complex, major, class-II antigens, microglial expression 316
Histology of nervous system 156–157 (BR)
HIV disease, neuronal death 112–113
HLA-DR, microglial expression 316
Homeobox genes
Drosophila, axonal guidance and 542
mammals, evolutionary and regulatory aspects 298 (BR)
Honey bee retina, signalling of metabolic requirements 360–362
Horizontal cells of retina, synaptic transmission from cones to 123–124, 125
Hormones, mast cells in brain affected by 28–29
HPRT gene transfer experiments 53
Huntingtin 561
Huntington's disease 24
triplet repeats in 449–450
6-Hydroxydopamine model of Parkinson's disease, gene therapy studies 53
5-Hydroxytryptamine (serotonin)
circadian rhythms in insects and 288, 289–290
5-HT_{1A} receptor antagonists in major depression, acceleration of effects of selected antidepressants by 378–383
5-HT_{2A} receptor, PET studies of drug binding 213
reuptake inhibitors in major depression, acceleration of effects of selected antidepressants by 378–383
Hyperalgesia, regulation or mediation 243, 244–245
Hyperkalaemic periodic paralysis and defective Na^+ channels 4, 4–7
Hypokalaemic periodic paralysis and defective Ca^{2+} channels 4, 9
Hypothalamo–pituitary–adrenal axis and NGF 516–517
Hypothalamus
magnocellular nuclei, see Magnocellular nuclei
neurone–glia interactions 363–367
Hypoxanthine-guanine phosphoribosyltransferase gene transfer experiments 53
Hypoxia
neuronal electrical responses to 438–439
vasomotor responses to 437–438

I

ICAM-1, see Intracellular cell adhesion molecule-1
Illusory contours 428–429, 432
Illusory line motion 415 (L)
Imaging (brain/CNS)
in drug research 211–214
functional, see Functional imaging
schizophrenia 173, 174
Immune system
interactions with nervous system 25–31, 316, 368 (BR), 515
cytokines and 46–47, 409, 515, 516
inflammatory brain disease and 331–339, 409–410
NGF and 515, 516
microglia in 25, 316
response
to adenoviral vector-transduced cells 51, 497–501
behaviour-related 29
to foetal nigral grafts, management 105–106
Immunoglobulin superfamily, CAMs as members of 474–475
Immunopathogenesis, multiple sclerosis 1–2
Impulse, nerve, ion channels and 564–565 (BR)
see also Action potentials
IN-1 (monoclonal antibody) 230, 233
Inflammation in CNS/brain 321–328
cytokines and 331–339, 410–411
demyelination and 1–2, 336, 500
NGF and 515
viral vector-related 498, 500
Information
parietal streams in visual cortex 483–486
processing
by graded-potential neurotransmission 292
temporal aspects 563 (BR)
temporal streams in visual cortex, see Temporal streams
Inhibitory neurones, gamma rhythms generated by 204–205
Inhibitory post-synaptic currents/potentials
erroneous 133
GABA receptor-mediated 98–99, 100, 206, 207
gamma oscillations and 206, 207
miniature, amplitude variation 170
in visual cortex, orientation selectivity 273, 274, 275, 276
Injury, see Trauma
Inositol phosphates (phosphoinositides)
calcium release from secretory vesicles and 411, 412
metabotropic glutamate receptors and hydrolysis of 267, 268–269
Insects
circadian rhythms 285–291
olfactory system 489–496
Integrator vs. coincidence detector, role of cortical neurone as 130–137, 405–406 (L)
Integrins 68–72, 474
neuropil immunostaining 69, 228 (L)
Integrity, scientific 523–524 (BR)
Intelligence, evolution 298–299 (BR)
Interferon-γ, CNS expression 332
Interferon-γ-inducible protein (IP-10) and leukocyte entry into CNS 333
Interleukin-1 (in neuroimmune interactions) 46–47, 316–317
CNS inflammatory disease and 332, 335–336, 410
microglial 316–317
Interleukin-2 and CNS inflammatory disease 335–336
Interleukin-6 (in neuroimmune interactions) 46, 317
astrocyte response to 317
Interleukin-converting enzyme (ICE) family 557
proteases, in apoptosis 555–562
Interneurones
synchronized oscillations and 468 (L), 469 (L)
visual, in flies 293
circadian rhythms and 286–287
Intracellular cell adhesion molecule-1 409
leukocyte entry into CNS and 332
Invertebrates, neurone signalling to glial cells 358–362
Ion changes
in leech glial cells in response to neurotransmitters 360
neurone–glia interactions and 353–355
Ion channels 407 (BR), 445 (BR), 526 (BR)
gene defects, myotonia and periodic paralysis related to 3–10
Müller cell 307
nerve impulse and 564–565 (BR)

oxygen-sensing 435–440
two-hybrid system for studying protein–protein interactions concerning 265
see also specific channels
IP-10 and leukocyte entry into CNS 333
Ischaemia (CNS/brain/cerebral)
apoptosis in 110–112
nucleosides and nucleotides in 17
zinc and neuronal damage in 449
Isocortex, see Neocortex
Isoluminance 394–400

J

Janus kinases (JAKs) 160, 335
Julesz, Bela 114–115 (BR)

K

Kainate receptors, schizophrenia and 416–417 (L)
Kanizsa triangle 428, 429
Kenyon cells (KC) and locust olfaction 490, 493–494
knirps gene 65
Knock-in mutant, behaviour studies 182
Knock-out (null) mutant mice
behaviour studies 177–189, 470–472 (L)
NO synthase studies 83–84, 277–278 (L)
kuz (*kuzbanian*) gene 528–530

L

L-type Ca^{2+} channels in magnocellular neurosecretory cells 442–443
L1 (cell adhesion molecule) 473–479
L1 (visual interneurones) and L2, circadian rhythms in *Musca domestica* 286–287
Lamina in housefly, circadian rhythms and 286, 287, 287–288
Land effect (colour constancy) 430, 459
Language 522 (BR)
LBO5HT optic lobe cells 289–290
Learning
gene-targeting studies 178
integrins and 71–72
metabotropic glutamate receptors and 219–224
NCAMs and 478
NO and 83
synchronization and 495
Leech glial cells, ion changes in response to neurotransmitters 360
Leptin 159, 160–161
receptor 160–161
Leukocytes, CNS entry 25, 331–333
see also specific types
Ligand-gated channels
desensitization, impact on fast synaptic transmission 96–101
post-synaptic signals at graded-potential synapses modified by 296
Light
horizontal cell response to (in turtle retina), recovery 125
reflex epilepsy (genetic form) in birds stimulated by 247–249, 250
rod sensitivity during adaptation to, regulation of changes in 73–81
LIM-domain proteins 240–241
Limax maximus, olfactory system 494
Lincoln illusion 487, 488
Line motion illusion 415 (L)
Lipid/fat
deposition, neuroregulation 159–160
intake (diet) and metabolism, brain development in relation to 253–254 (BR)
neuronal membrane, neurite outgrowth and 147
LO (region posterior to area MT) 485, 487
Local field potential (LFP) and locust olfaction 490
Local neurones (LNs) and locust olfaction 490, 493
Locust olfactory system 489–496
Loligo paelei, see Squid
Long-term processes, see Depression; Memory; Potentiation
Luminance 394–400
Lungs, neuroepithelial chemoreceptors for oxygen 437
Luteinizing hormone releasing hormone 365, 366
Lymnaea stagnalis, respiratory central pattern generator 59
Lymphocytes entering CNS 25, 331–332

M

Macaca visual cortex 481
Macaque visual cortex
information streams 483
maps 481, 484, 485
Macrophage (of brain), microglia as 25, 312–318
CNS damage and 336
Macrophage–CSF, microglial responses 314–315
Macrophage inflammatory proteins (MIPs) and leukocyte entry into CNS 333
Magnetic resonance imaging 568 (BR)
hippocampal volume measurement, apolipoprotein E and 225–226
schizophrenia 173, 174
visual cortex 482, 483–485, 486–487
Magnocellular nuclei, hypothalamic
neurone–glia plasticity in 365
secretory cells, Ca^{2+} channel subtypes in somata and axon terminals of 440–444
Major histocompatibility complex class-II antigens, see MHC class-II antigens
Malignancy, see Cancer
Mammals
gene targeting, see Gene targeting
spinal cord regeneration after injury in immature 229–234
Manic–depressive illness, genetics 194
Map(s), see Atlases
MAP kinases 15–16
Mast cells (in brain/CNS) 25–31, 517–519
behaviour affecting 27–28
defence mechanisms and 518–519
hormones affecting 28–29
identification 25–26
nervous system homeostasis and 517–518
NGF and 517–519
MCP-1 and leukocyte entry into CNS 333
mec genes and their products 259–260
Mechano-gated channels, touch sensitivity studies and 259
Medial superior temporal area, dorsal (MSTd) 486
Medial temporal area, see V5
Mek4 511, 544
Membrane, plasma
of graded-potential neurones, mean membrane potential 295
of growing axons, addition of new membrane 144–146
synaptic transmission and surface charges at 121–124, 125
Memory 215–218, 522 (BR)
apolipoprotein E and disorders of, in Alzheimer's disease and non-demented elderly 224–228
integrins and 71–72
long-term, mechanisms for generating synapse specificity 215–218
metabotropic glutamate receptors and 219–224
NCAMs and 478
Mesencephalon and genetic form of reflex epilepsy 248–249, 250–251
Messenger, second, see RNA
Messenger RNA, see RNA
Metabolic interactions between glia and neurones 353–355
bee retina 360–362
Metabotropic glutamate receptors 219–224, 267–271, 339–340
agonists 268, 269, 270

Mismatch negativity 252–253 (BR)
Mitochondria
DNA, myopathies and neuropathies associated with mutations in 467
dysfunction in Friedreich's ataxia 465–468
Mitogen(s)
astrocytic, nucleosides and nucleotides as 13–16
microglial 314–315
Mitogen-activated protein kinases 15–16
MN20/D2 cyclin 65
S-modulin 549
Moesin 375
Molecular neuropathology 155–156 (BR)
Mondrians 430
Monkey, network contribution to behaviour 538
Monoamine oxidase inhibitor, effects on
5-HT neurones in dorsal raphé nucleus 378–379
5-HT release in, and effects of SSRIs 379, 380
Monocyte chemoattractant peptide-1 and leukocyte entry into CNS 333
Monodelphis domestica, CNS and spinal cord regeneration in 230–231, 232
Monte-Carlo model of transmitter clearance 164, 165
Morphogenic effects of nucleosides and nucleotides on astrocytes 13–14
Motility, cell, CAMs and 474, 475
Motion, see Migration; Motility; Movement
Motor circuits, intrinsic and extrinsic neuromodulation 56–58
Motor control
directional 137–138 (L)
3D visual perception and, interaction between 196–202
Motorneurone loss and survival in development 450–455, 560
Mouse, see Mice
Movement/motion 137–138 (L), 196–202, 394–401
self- 196–202
control of 137–138 (L), 197–198
influence of 3D structure on 197–198
in processing of optic flow, interactions with depth perception 196–202
in visual pathways 394–401, 431
coherence 431
colour and, interaction 394–401
perception 115 (BR)
see also Motility
Movement disorders and basal ganglia 417–422
MST areas in visual cortex, optic flow analysis and 199–200
MT, see V5
Müller cells 307–312
morphology 307
neuronal signal recognition by 308
physiology 307
Multiple sclerosis 1–2, 301 (BR)
cytokines in 334–336, 409, 410
mast cells and 518
Multipotent precursors in developing CNS 387–388
see also Stem cells
Musca domestica optic lobe, circadian rhythms 285–291
Muscle
motorneurone and targeted, interactions between 454
reinnervation, terminal Schwann cells inducing/guiding 280–285
Mushroom body and locust olfaction 490, 491, 492, 493
Myelin 367–368 (BR)
axon regeneration in spinal cord injury blocked by 230
Myelin sheath 1–2, 564–565 (BR)
destruction, see Demyelination
oligodendrocytes and 1–2, 94
restoration, see Remyelination
Myocytes, arterial, hypoxia and 438
Myotonia, ion channel gene defects in 3–10

N

N-type Ca^{2+} channels in magnocellular neurosecretory cells 443
NCAMs, see Neural cell adhesion molecules
Necrosis, neuronal 109
apoptosis, relationship between 112
Nedd-2 gene 559
Neocortex (isocortex)
evolution 89–92 (L)
heteromodal association, schizophrenia and 171–176
Neoplasms, see Cancer; Tumours
Neostriatum, see Striatum
Nerve growth factor (NGF) 449, 514–520
defence strategies of nervous system and 514–515
hyperalgesia and 244–245
Netrins 510–511, 527–528
Networks (cerebral/neural) 319–325, 535–542, 562–564 (BR)
ascending projections into 538–539
astrocytic 319–325
intercellular signalling 350–351
descending projections from 539–540
feedback projections from 539
lateral connections within 539
models 562–564 (BR)
neuronal 538–540
for induced '40Hz' (gamma) rhythms 202–207, 469–470 (L)
physics 562–564 (BR)
reversible deactivation of components 535–542
Neural cell-adhesion molecules (NCAMs) 473–480
activity-dependent plasticity in development and 473–480
polysialic acid attached to 366, 422–427
synaptic plasticity and 477–479
Neural simulation programs 190 (L), 279 (L)
Neural visinin-like proteins (NVP) 553
Neurite, see Axon
Neuroanatomy
heteromodal association neocortex 172
zebrafish 525 (BR)
see also Atlases
Neurocalcin 551
Neurodegenerative disease
metabotropic glutamate receptors as therapeutic targets in 267–271
triplet-repeat family of 449–450
see also Neurones
Neuroeconomics of neurite outgrowth 144–149
Neuroendocrine interactions, see Endocrine system
Neuroepithelial airway chemoreceptors for oxygen 437
Neuroethological approach to researching bat audition 565 (BR)
Neurofibromatosis type 2 373–377
Neurogenesis, see Development
Neuroglia 367–368 (BR)
Neuroimaging, see Imaging
Neuroimmune interactions, see Immune system
Neuroleptic drugs
movement disorders with 420–421
PET studies of drug binding 213
Neuromodulation of neuronal circuits, intrinsic and extrinsic 54–61
Neuromuscular circuits, intrinsic and extrinsic neuromodulation 56–58
Neuromuscular junctions, terminal Schwann cells inducing/guiding sprouting and reinnervation of 280–285
NEURON software program 190 (L)
Neurone(s)/neuronal cells
branches, increases during development 461
Ca^{2+}-activated K^+ currents in 150–154
circuits between, intrinsic and extrinsic neuromodulation 54–61
cortical, see Cortical areas
degeneration and death 449
metabotropic glutamate receptors as therapeutic targets affecting 267–271
motorneurone, factors influencing 451, 560
see also Apoptosis; Necrosis
degeneration and death, selective/delayed
cytokine role 410
in ischaemia/epilepsy/gp120 toxicity 109–114
mechanisms (in general) 113
disparity-sensitive, binocular vision and stereopsis and 408 (BR)
electrophysiology 155 (SR)
firing 202–204
patch-clamp studies and 530–534
genes introduced into 49–50
glial cell interactions with 306
astrocytes 316–318, 324, 327–328, 329
Ca^{2+} signals and 349–350, 351
in hypothalamus and pituitary 363–367
in invertebrates 358–362
microglia 316–318
Na^+ channels and 327–328, 329
in non-synaptic areas of brain 352–358
relative proliferation influenced by 64
in retina 308–311
hypoxia-associated electrical responses 438–439
microtubules 446 (BR)
Na^+ channels in, see Sodium ion channels
networks, see Networks
NO, see Nitric oxide; Nitric oxide synthase
number of elements
initial excess in development 460–461
intraspecies variations in 460
outgrowth, see Growth

synchronization of activity 134–135, 415–416 (L)
trophic actions of nucleotides and nucleosides on 13–18
visual cortical, see Visual cortex
Neurone-specific Ca^{2+}-binding proteins 551, 552
dendrogram 552, 553
structure 553
Neuropathology
microglia as sensor for pathological events 306, 312–318, 351
molecular 155–156 (BR)
of retinal Ca^{2+}-binding proteins 551–552
schizophrenia 173, 174
Neuropeptide Y stimulating eating 159
Neuropil, integrin immunostaining 69, 228 (L)
Neuroprotection
metabotropic glutamate receptors in 268, 270
microglia in 315–316
Neuropsychiatric disorders, genetics 194–195
see also specific disorders
Neurosecretion, see Secretory cells; Secretory granules
Neurosim 190 (L), 279 (L)
Neurotoxins Supplement (June)
Neurotransmission (synaptic transmission) 119–120, 163–171
Ca^{2+} and, see Calcium ions
fast, impact of receptor desensitization on 96–101
glutamate, presynaptic inhibition 237–238
graded-potential, information processing by 292
long-term regulation of, see Depression; Potentiation
at neuromuscular junction, terminal Schwann cells sensing/responding to 281
presynaptic mechanisms 119–120, 235–239
Neurotransmitters 163–171
astrocytic gap junction communication and role of 321
clearance or removal 163–171
mechanisms 167–169
by Müller cells 309
timecourse 163–171
glial cells and effects of
gene expression and 343–344
in leech 360
plasticity of neurotransmitter expression 348–349
receptors on Müller cells for 307, 308
release
on growth-cone contact of target cell 454
mechanisms 121, 167–170
by Müller cells 310
see also specific transmitters
Neurotrophic factors and motorneurone survival in development 452–453
Neurotrophins (NTs) 389, 514–520
astrocytic synthesis, nucleosides and nucleotides effecting 14
NT-3, motorneurone survival and 452, 453
NT-4, motorneurone survival and 452, 453
NF2 gene and neurofibromatosis type 2 373–377
NGF, see Nerve growth factor
NI-35 and NI-250 229–230, 233, 512
Nicotinic ACh receptors, slow desensitization and fast recovery 97
Nigral transplant, foetal, in Parkinson's disease 102–109
Nigrostriatal dopamine-containing pathway, lesions 418–421
external pallidum output with 418–421
in Parkinson's disease 418
Nitric oxide
CNS demyelinating disease and 336, 410
Müller cell 311
neuronal, functional significance 83–84, 277–278 (L)
neurotoxicity and 410, 568 (BR)
Nitric oxide synthase, neuronal
aggression and 84, 277–278 (L)
gene, targeted deletion 83–84, 277–278 (L)
NMDA receptors
astrocytes 341
as coincidence detector 566 (BR)
gamma rhythms and 468–469 (L)
metaplasticity and 126–130
motorneurones and 454–455
schizophrenia and 416–417 (L)
timecourse of transmitter clearance and 165, 166, 167
toxicity 269
two-hybrid system for studying protein–protein interactions 265
NO, see Nitric oxide; Nitric oxide synthase
Nociception
NGF and central 515
NGF and peripheral 514–515
nociceptor development and function 240–246
Nodes of Ranvier, astrocytes as component of 326
Noise, interfering in coincidence-detection and temporal-integration schemes
erroneous 132
see also Signal-to-noise ratio
Nucleosides, trophic actions on glial and neuronal cells 13–18
Nucleotides, trophic actions on glial and neuronal cells 13–18
see also specific nucleotides
Nucleus of glial cells, glutamate receptor-mediated signalling to 343–344
nuk gene 527
Null-mutant mice, see Knock-out (null) mutant mice
numb gene, and protein product 45
Nystagmus, optokinetic (OKN), optic flow and motor response studies in 198, 200

O

O–2A cells 367 (BR)
glutamate receptors 342–343
ob/*ob* mouse 159–160
Object
recognition 401–405, 415–416 (L)
in temporal stream 487–488
vision 404
Odours, dynamical representation of 489–496
Olfactory processing 489–496
Oligodendrocytes 92–96, 368 (BR)
Ca^{2+} signals 349
cytokine effects 335
damage and death, models 336, 337
development 92–96, 368 (BR)
spinal cord regeneration failure following 230
glutamate receptors 342–343, 349
myelination and 1–2, 94
defects in 336
nucleotide and nucleoside effects on 16
optic nerve, see Optic nerve
see also O–2A
129-type strain, gene targeting/null mutants 178–180, 182, 183–185, 277–278 (L)
Opioid(s)/opioid peptides, dual acting 31–35
Opioid receptors 31–35
characteristics 33
neurobiology 31–32
Opossum, CNS/spinal cord regeneration in 230–231, 232
Optic flow, self-motion and depth perception in processing of, interactions between 196–202
Optic lobe, fly, circadian rhythms 285–291
Optic nerve
development 354
neuronal–glial interactions 352–358
oligodendrocytes
development 93
morphology 353
regeneration, see Regeneration
Optimization, component-placement, in brain 413–415 (L)
Optokinetic nystagmus (OKN), optic flow and motor response studies in 198, 200
Orientation selectivity of visual cortical neurones 272–277
Oscillations, see Rhythms
Out-group hypothesis 89 (L)
Outgrowth, neurite, economics 144–149
Oxford University, Wellcome Trust PhD programme in neuroscience 47–48
Oxygen burst, microglial 336
Oxygen radicals, free, neural injury and 568 (BR)
Oxygen-sensing ion channels 435–440
Oxytocin 367

P

P-type Ca^{2+} channels in magnocellular neurosecretory cells 443
P_1, P_2 purinoceptors, see Purinoceptors
p23 (neurocalcin homologue) 551
p35 (baculovirus ICE inhibitor) 558, 559
p53
cell cycle and 67
as protagonist of apoptosis 113
p75 (low-affinity neurotrophin receptor) 449
Pain, nociceptor development and function and its significance for 240–246

bleaching/photolysis 502–504, 548–551
Rhythms/oscillations
circadian, see Circadian clocks/rhythms
gamma/'40Hz', see Gamma oscillations
odour-induced 489–496
synchronized 468 (L), 493, 495
Ribbon synapses 294
mRNA
differential display 84–88
NCAM, splice variants 476
synthesis, see Transcription
translation, long-term memory and 216, 217
robo (*roundabout*) gene 528
Rods (photoreceptor), vertebrate
dark adaptation 502–506
regulation of sensitivity by Ca^{2+} 73–81
roundabout (*robo*) gene 528

S

S-modulin 549
Salamander rods, light adaptation in 79
Saltatory conduction 564 (BR)
Sarcolemma, myotonia and periodic paralysis and aberrant excitability in 3–10
Schizophrenia 171–176, 416–417 (L)
dopamine receptors and, drug binding to 212, 213
genetics 171–176, 194
glutamate receptors and 416–417 (L)
heteromodal association neocortex and development and 171–176
Schwann cells 280–285
Ca^{2+} signals 349
development 368 (BR), 369 (BR)
glutamate receptors 349
myelination and 1–2
Na^+ channels, voltage-gated 326
squid giant cell axons signalling to 358–359
terminal, nerve growth and sprouting induced or guided by 280–285
Schwannomas of type-2 neurofibromatosis 373–374
Schwannomin 374–376
Scientific integrity 523–524 (BR)
Scientific writing, successful 446–447 (BR)
Scotoma, retinal, filling-in 430, 432
Scrapie 257
Second messengers (and signal transduction systems) 153
Alzheimer's disease and 371–372
Ca^{2+} as a Ca^{2+}-activated second messenger 153
in glia
in astrocytes, gap junction regulation and role of 322
in microglia 315
in Müller cells 308
metabotropic glutamate receptors and 220, 267, 268–269, 270
two-hybrid system in studies of 266
Secretory cells, magnocellular, Ca^{2+} channel subtypes in somata and axon terminals of 440–444
Secretory granules, Ca^{2+} release from 411–413
Segmentation gene in *Drosophila* 65
Seizures, EEG studies in genetic form of reflex epilepsy in birds 247, 248, 249, 251
Sek1511
sek4 gene 527
Self-motion, see Movement/motion
Self-renewing neural stem cells 389
Semaphorins 509–510
Sensory neurogenesis, genes involved in 240–246
Sensory circuits, intrinsic neuromodulation 55–56, 58
Serotonin, see 5-Hydroxytryptamine
Sex (gonadal) steroids and mast cell degranulation 28
Sexual behaviour, mast cells in brain and 27–28
Shaker-type K^+ channels 265
Sight, line-of- (of others), autism and following of 299–300 (BR)
Signal (cell) and signalling
distortion with patch-clamp amplifiers 532–533
glial cells (Special Issue) 205–269

neuronal signal processing, desensitization and its implications for 99–101
Signal (voltage), neuronal signal processing, presynaptic 294–296
Signal-to-noise ratio in CNS, metabotropic glutamate receptors modulating 222–223
Signal transducers and activators of transcription (STAT) 160, 335
see also Second messengers
Signal transduction
Alzheimer's disease 371–372
P_2 purinoceptors and mechanisms of 568–569 (BR)
in photoreceptor dark adaptation 504–506
SK_{Ca} channels 151, 152
Smells (odours), dynamical representation of 489–496
Snail neuronal signalling to glial cells 359–360
SNAP receptors (SNAREs) 146
SNAP-25 146
SNAREs (SNAP receptors) 146
SNS Na^+ channels 242–243, 244
Sodium ion channels
amiloride-sensitive rat epithelial, in touch sensitivity studies 259
defective, myotonias and periodic paralysis and 4–7
glial 356
density in astrocytes 329
in optic nerve 356
voltage-gated 325–330, 356
neuronal/axonal
density 329
nerve impulse and 564–565 (BR)
peripheral sensory neurogenesis and 242–243, 244
Sodium ion/potassium ion-ATPase in astrocytes 329–330
Sonar (echolocation), bat 565–566 (BR), 567 (BR)
Sound, reflex epilepsy (genetic form) in birds stimulated by 247–249, 250
Spatial learning, gene-targeting studies 178
Spatiotemporal aspects of receptive fields in visual pathways 385–386 (L)
Speed, perceived 396–398
Spheres of undifferentiated cells, forebrain precursor cells giving rise to 388–392
Spike recordings with patch-clamp amplifiers, see Patch-clamp studies
Spinal cord
noxious input 245
oligodendrocyte development 93, 94
regeneration in immature mammals after injury 229–234
Spinocerebellar ataxia
Friedreich's disease, see Friedreich's ataxia
type 1, gene defect 450
Spongiform encephalopathies, transmissible 257–258, 520–521 (BR)
Squid (*Loligo paelei*) giant axon 115 (BR)
signalling to Schwann cells 358–359
STATs 160, 335
Status epilepticus, apoptosis in 110–112
Stellate glial cells in pituitary 363, 364
Stem cells
embryonic (of 129-type mice), gene targeting studies 178–180, 182, 183–185, 277 (L), 278 (L)
neural
asymmetrical division 45
in mammalian forebrain 387–393
Stereogram, random dot 114 (BR)
Stereopsis, see Depth perception
Steroids
growth factor interactions 365
mast cell degranulation affected by 28–29
Stiff-man syndrome 301–302 (BR)
Stomatogastric ganglion of decapod crustaceans, neuromodulation in 60
Strabismic cats, neuronal synchronization experiments 134–135
Stress and NGF 517
Striate cortex, see V1
Striatum (neostriatum)
dopamine and 279–280 (L)
excitatory post-synaptic potentials in, cortical activation inducing 19, 20
foetal nigral tissue grafted into 102–109
region of striatum 105
long-term depression in, mechanisms 21, 22
Subependymal neural stem and progenitor cells 391–392
Substantia nigra (in movement disorders) 420
in Parkinson's disease 260–270
Subthalamic nucleus and movement disorders 418–421
Suprachiasmatic nucleus
Ca^{2+} waves 364–365
circadian rhythms and 257–258
Suprasylvian cortex, ventral posterior, cat behaviour and 536
Suprasylvian sulcus, middle, cat behaviour and 536
Surface charges on plasma membrane, synaptic transmission and 121–124, 125
Swim central pattern generator of *Tritonia diomedea* 58–59
Synapses
bouton 294
brain sites distantly linked by, viral vectors and 498
cleft, timecourse of transmitter clearance from 163–171
in development
elimination 461–462
increased numbers 461
in long-term memory, mechanisms for generating specificity 215–218
NO and 83
plasticity and remodelling 19–24 126–130, 477–479, 566–567 (BR)
biochemical correlates of 129
corticostriatal fibres and 19–24
glutamate exocytosis and 237
higher-order form of, see Metaplasticity
long-term potentiation and its effects on subsequent induction of 129
metaplasticity occurring concurrently with 129
NCAMs and 477–479
polysialic acid and 423–424
ribbon 294
tonically-active, information processing by graded-potential transmission through 292
transmission, see Neurotransmission; Neurotransmitters
Synaptic vesicles (in transmitter release)
fusion 167
release/exocytosis 411–413
of Ca^{2+} 411–413
in glutamate-containing neurones 235–239
sites 169–170
see also Acetylcholine
Synaptogenesis, apolipoprotein E and 227
Synaptosome 235
Synchronization (of neuronal activity) 134–135, 415–416 (L)
learning and 495
locust olfactory system 493, 495
oscillations 468 (L), 493, 495
Syncytium, glial 322–323

T

T cells
adenoviral vectors and 499–500
CNS entry 331–332, 409
T-type Ca^{2+} channels in magnocellular neurosecretory cells 442
Tardive dyskinesia, drug-induced 420
Targeting (in neuronal growth/development)
motorneurones 450–455, 560
repulsive guidance cues 507–514, 527–528
retinotectal 543
Tay–Sachs disease 181
Teaching ethics 523–524 (BR)
Tectum, retinal axons projecting into 527, 542–546
Telencephalon
genetic form of reflex epilepsy and 249, 250–251
organization 89 (L)
Temporal area, medial/middle, see Medial superior temporal area; V5
Temporal aspects
coding and information processing in biological systems 563 (BR)
olfaction in locusts 492–493
receptive fields in visual pathways 385–386 (L)
Temporal gyrus, superior, schizophrenia and 173–174
Temporal integrator, cortical neurone as 130–137, 415–416 (L)
Temporal streams of information (visual cortex) 483, 486–487
object recognition in 487–488
Tenascin 70, 71, 476
Terminal transferase in assay of DNA breaks in apoptosis 111–112
Tetraethylammonium (TEA)
afterhyperpolarization and Ca^{2+}-activated K^+ channels insensitive to 151
afterhyperpolarization and Ca^{2+}-activated K^+ channels sensitive to 150, 151
Texture perception 115 (BR), 431–432
TGF, see Transforming growth factor
Thalamus and neural correlates of consciousness 456
Theory of mind and autism 299–300 (BR)
Thomsen's myotonia and defective Cl^- channels 4
Three-dimensional visual perception and self-motion, interactions between 196–202
Time, see Circadian clocks; Temporal integrator
TLD-4A2 and T-cell migration 409
Tonic G-protein-mediated inhibition of Ca^{2+} currents in excitable cells 42

Tonically-active synapses, information processing by graded-potential transmission through 292
TOP_{AP} and retino–tectal gradients 544
Topography, see Atlases
Touch sensitivity 258–261
Trace radiolabelled compounds in drug research, PET measurement 211–214
Training
of postgraduates in neuroscience 47–48
of rats, metabotropic glutamate receptor studies and injections of drugs before/after 220–221
Transcription (DNA to RNA)
long-term memory requiring activation of 215–218
signal transducers and activators of (STATs) 160, 334
Transcription factors
sensory neurogenesis and 240–241
in two-hybrid system for assaying protein–protein interactions 261–266
Transducin 504–505, 506
Transforming growth factor-α 365
Transforming growth factor-β1 317–318
Transgenes
in gene therapy studies, expression 52, 53
in nociceptor functional studies 244
Translation (of mRNA) and long-term memory 216, 217
Transmission, see Neurotransmission; Neurotransmitters
Transplants/grafts
from adrenal medulla, in Parkinson's disease 106
of neural tissue 369 (BR)
genetic form of reflex epilepsy studied via 247–249
in Parkinson's disease, from foetus 102–109
to spinal cord after injury 229
Transport processes, cell 525–526 (BR)
Trauma/injury/insults (to CNS) 568 (BR)
axon regeneration after, see Regeneration
Ca^{2+} signalling in response to 351
connexin43 distribution in response to 320
mechanisms 568 (BR)
microglial graded response to 313
motorneurone loss after nerve injury 451–452
nucleosides and nucleotides in 17
see also Wound healing
Triplet-repeat diseases 449–450
Tritonia diomedea, swim central pattern generator 58–59
Trk, see Tyrosine kinase receptors
Trophic actions of nucleotides and nucleosides on glial and neuronal cells 13–18
Tumorigenesis in neurofibromatosis type 2 373–374
Tumour(s)
glial cell 369
malignant, see Cancer
Tumour necrosis factor in CNS 332
in inflammatory/autoimmune disease 335–336, 409
Tumour suppressor genes 374–375
TUNEL assay of DNA breaks in apoptosis 111–112
Two-hybrid system for studying protein–protein interactions in the nervous system 261–266
Tyrosine hydroxylase 191–196
gene and its expression 192–193
immunoreactive neurones, in foetal nigral transplant studies 104, 106
long-term activation 192–193
Tyrosine kinase receptors (trk) 449
erythropoietin-producing hepatocellular (Eph) 511, 527, 545
trkA 449
trkB, motorneurone survival and 453
trkC, motorneurone survival and 453

U

unc-5 gene and product 510, 511, 527
unc-6 gene and product 510, 511, 527
unc-40 gene and product 527
Unconscious vision 401–402
University College London, Wellcome Trust PhD programme in neuroscience 47–48
University of Oxford, Wellcome Trust PhD programme in neuroscience 47–48

V

V1 (area 17; striate cortex) 481, 538, 539
neural correlates of consciousness and 456–459
orientation selectivity of cells in 272, 273
species differences 481
V2 539
GABA application, effects 539
species differences 481
V3 and V3A 485
V4 486–487, 538
V5 (medial temporal area/area MT) in visual cortex 398–400, 483–487
coherent motion and 431
optic flow analysis and 199–200
parietal stream of information and 483–487
V642 mutations in familial Alzheimer's disease 371–372
Vascular cell adhesion molecule-1 and leukocyte entry into CNS 332
Vasomotor responses to hypoxia 437–438
VCAM-1 and leukocyte entry into CNS 332
Ventral origin of oligodendrocytes 93–94
Ventricular cells, oligodendrocytes arising from 93–94
Very late antigen-4 and leukocyte entry into CNS 332
Vesicles
brain, genetic form of reflex epilepsy studied at stage of development of 248–251
membrane-derived, neurite outgrowth and 146, 148
in transmitter release, see Synaptic vesicles
Viruses
apoptosis regulation and role of 558–559
as vectors (for gene transfer) 50–52, 195
immune response in nervous system 51, 497–501
Visinin 551
Visinin-like proteins (VILIPs) 551, 553
Vision 401–405
binocular 114–115 (BR), 407–408 (BR)
functions 404
neuronal correlates of 405
varieties 401–405
phenomenal vision, see Phenomenal consciousness
Visual cortex 272–277, 456–459, 481–489
areas V1–V5, see V1; V2; V3; V4; V5
network/connections 488
behavioural studies 536–537
neurones 405
optic flow analysis in 199–200
orientation selectivity of 272–277
Visual interneurones, see Interneurones
Visual system 114–115 (BR), 481–489
axonal pathfinding 527, 542–546
lesions and their effects 401–405
motion and colour in, interaction 394–401
perception in, see Perception
phototransduction, see Photoreceptors (and phototransduction)
presynaptic signals 292
receptive-field dynamics in pathways 385–386 (L)
self-motion and depth perception in processing of optic flow 196–202
see also specific regions
Vitamin E deficiency-associated ataxia 465
VLA-4 and leukocyte entry into CNS 332
Voltage followers 531
Voltage-gated/dependent channels
Ca^{2+} channels (in excitable cells)
facilitation of currents through 35–43, 383–384 (L)
in glial cells 347
neurotransmission and 120–125
K^+ channels, in hypoxia 438
Na^+ channels, glial 256, 325–330
post-synaptic signals at graded-potential synapses modified by 296

W

WAY100635 (5-HT_{1A} antagonist) 380
Wellcome Trust, PhD programmes in neuroscience 47–48
wg (*wingless*) gene 545, 546
Wiring, brain 413–415 (L)
Wnt1 gene 545, 546
Wound healing in CNS, extracellular matrix molecules in 71
Writing, successful scientific 446–447 (BR)

X

Xenografts in Parkinson's disease 106

Y

Yeast-based assay for assaying protein–protein interactions in the nervous system 261–266

Z

Zebrafish, neuroanatomy of the 525 (BR)
Zinc and ischaemic neuronal damage 449
